Potential competing interests: No potential competing interests to declare.

The authors have summarized the main effect of nicotine on oral health in this short review. However, the discussion should be longer and include more references. For the effect of "Heat-not-burn tobacco products" on some general parameters, I can suggest the Begic et al. article "Heat-not-burn tobacco products and cardiovascular risk reduction: A systematic review of randomized controlled trials. The next goal could be finding a connection between the abovementioned parameters and oral health status in the review.
