Potential competing interests: No potential competing interests to declare.

This article presents a comprehensive analysis of the cognitive abilities of nations and their impact on social, cultural, and economic development. The integration of psychometric intelligence research, international student assessment studies, and Piagetian developmental psychology demonstrates a strong and holistic approach. This research updates national IQ data for 205 countries, revealing a close relationship between national IQ and various life variables. A special focus on non-linear relationships adds unique value to this study. Overall, this article is an important contribution that combines various disciplines to provide a deep understanding of national intelligence and its impact.
