**Potential competing interests:** No potential competing interests to declare.

The article analyzes 2023 Canadian university publications, revealing prominent academic associations, leading disciplines, collaborative efforts, and public and private contributions. It shows how university publications advance knowledge, society, and the economy. The findings are transparent due to the meticulous methodological approach. Canadian and international academic collaboration and interdisciplinary research are notable. Despite publishing less than public universities, private institutions add depth to the analysis by demonstrating their significant contributions. Even though this review is a pre-print article, it could benefit from more information about the significance of publications, as well as how these conclusions may affect funding and academic policy.
