Potential competing interests: No potential competing interests to declare.

The paper reviews previous studies on *Rubus fraxinifolius*, focusing on therapeutic and nutritional properties. There are a few issues that need to be addressed:

1. Title is appropriate
2. Style of writing needs to be improved as the current state seems like a copy from a thesis or some sort. Some of the content should be re-arranged.
3. The review is a bit localized to Sabah, Malaysia. It should be more global, extending to other parts of the world.
4. Should provide references for all the previous studies on biological properties (inflammatory, antioxidant, anti-diabetic, etc.) mentioned in the Introduction.
5. In Nutritional Composition, it should focus on nutritional parameters such as sugars, protein, minerals, etc. The phytochemical content that relates to antioxidant activity and other therapeutic activities should be in the subsequent section (Functional Properties) together with other biological properties.
6. In Functional Properties, the first 3-4 sentences should be in the Nutritional Composition section.
7. There should be one section devoted to the phytochemical study of this plant.
8. The manuscript needs to be proofread for English.
