Campylobacter curvus

National Cancer Institute

Source

National Cancer Institute. *Campylobacter curvus*. NCI Thesaurus. Code C86232.

A species of microaerophilic, Gram-negative, curved or spiral bacilli assigned to the phylum Proteobacteria. This species is motile using a single polar flagellum, non-spore forming, oxidase positive, catalase negative and produces both formate and acetate. *C. curvus*, formerly known as *Wolinella curva*, is a rare pathogen associated with cases of bloody and Brainerd's diarrhea.
