

Review of: "[Commentary] #BetterPoster: The gateway to accessible science"

Michael Kwarteng

Potential competing interests: The author(s) declared that no potential competing interests exist.

This article focuses on the considerations and methods by which scientists with low vision or other disabilities can increase their accessibility to scientific knowledge during conference poster presentations so they can participate fully. It is commendable to adopt new goals for the design of posters (#BetterPoster billboard), which are simple and easy to access for both physical and digital/virtual posters. This design will reduce the amount of time spent on a poster during scientific meetings and make it easier for readers with low vision to see the posters.
