Potential competing interests: No potential competing interests to declare.

Some revisions are needed, including:

1. The method of calculating and predicting the temperature should be detailed. How the calculated and predicted temperatures are conducted based on the measured parameters.
2. The indices for assessing thermal comfort should be further explained. For example, PMV or adaptive thermal comfort based?
3. Revise the tables and figures. For instance, figure 6 indicates RH as 0%. Is it even possible? Furthermore, some explanation on how to use Figures 4-6 in the analysis.
