

# Review of: "Toward a comprehensive behavioral model of hurricane preparedness: The Protective Behavior Model"

Madhumita Dobe

Potential competing interests: No potential competing interests to declare.

'Toward a comprehensive behavioral model of hurricane preparedness: The Protective Behavior Model' is a very well written paper from research which has efficiently and effectively used relevant behaviour constructs to fit into the model.

The methodology used was appropriate and the interpretations were drawn with an iterative approach following both inductive and deductive logic for constant comparative analysis.

The comprehensive behavioral model thus developed - 'The Protective Behavior Model (PBM)', used constructs from 23 different theories in human behavior extensively.

Researchers will find this model useful for explaining and predicting other sets of protective human behaviors.
