

Review of: "Modelling of Quadcopter for Precision Agriculture and Surveillance Purposes"

Luz Balderas

Potential competing interests: No potential competing interests to declare.

The work presented still needs more valuable information to determine the proposal's effectiveness with other quadcopters already on the market. Furthermore, the graphs showed a need for comparative data with other UAVs that validates the performance, in this case, how expensive it can be or if it is better in terms of operation. Because otherwise, it is difficult to determine the contribution of this research.

The figure of the prototype should be described more clearly because it has many dimensions. To understand the contribution more accurately, a comparative table about other similar works should be placed in the introduction.
