3. Make a word abbreviated in the article that is repeated at least three times in the text, not all words to be abbreviated.

4. The full form of the species should be given when the first time appears in both the abstract and in the remaining part of the manuscript and it should be followed by only the first letter of the genus (e.g., *Trigonella foenum-graecum* / *Quercus infectoria* when the first time appears and followed by *T. foenum-graecum* / *Q. infectoria*).

5. In the conclusion, it is highly recommended to include limitation of the study and potential future research goals.
