Potential competing interests: No potential competing interests to declare.

In order to align the manuscript more closely with the objectives outlined in the current title, the authors should consider implementing revisions encompassing structural and content-related enhancements. Specifically, it is recommended that the authors exercise discernment in their presentation of well-known information within the subject matter and, in parallel, offer a critical analysis of the data gleaned from existing optimization studies. Indeed, data of optimization studies on wastewater treatment are missing. All low-rate previous feedback provided constructive comments on this work and should be considered to improve the manuscript content.
