# Neonatal diabetes mellitus (NDM)

National Diabetes Information Clearinghouse (NDIC)

## Definitions

### Monogenic

Defined by National Diabetes Information Clearinghouse (NDIC)

### Diabetes

Defined by National Diabetes Information Clearinghouse (NDIC)

### Permanent neonatal diabetes mellitus (PNDM)

Defined by National Diabetes Information Clearinghouse (NDIC)

### Transient neonatal diabetes mellitus (TNDM)

Defined by National Diabetes Information Clearinghouse (NDIC)

## Source

National Diabetes Information Clearinghouse (U.S.). (2009). *The diabetes dictionary*. [Bethesda, Md.]: U.S. Dept. of Health and Human Services, National Institutes of Health, National Institute of Diabetes and Digestive and Kidney Diseases, National Diabetes Information Clearinghouse.

A rare, **monogenic** form of **diabetes** that occurs in the first 6 months of life. In about half of those with NDM, the condition is lifelong and is called **permanent neonatal diabetes mellitus (PNDM)**. In the rest of those with NDM, the condition is transient and disappears during infancy but can reappear later in life; this type of NDM is called **transient neonatal diabetes mellitus (TNDM)**.
