Dear Authors,

I appreciate the opportunity to review your manuscript titled, "The Anti-Staphylococcal Activity of Probiotic-Containing Gelatin and Whey Coatings on Processed Chicken Breast," in Qeios. The subject matter of the article is both interesting and insightful.

I would like to highlight a few suggestions for improvement. Firstly, it is recommended to use the standard scientific notation '3g' instead of '3gr' for consistency. Additionally, there are some typographical errors that may need attention.

Considering these minor adjustments, I believe the article is well-suited for a short communication in the journal.

Thank you for your valuable contribution, and I look forward to seeing the potential revisions.

Best regards,

Venetia
