The English spelling/writing of the article should be revised. There are a lot of sentences that are not clear and hard to understand.

Methods should be given in more detail.

Results must be presented in more detail, and tables should be explained.

The authors must state the limitations of the study.

The manuscript needs to be deeply revised and the grammatical errors corrected.

The p-value presented in Table 2 (p=0.007) is different from the p-value at the bottom of the table (p=0.01).

Table numbers should be mentioned in the text (the above table).

What do you mean by the use of "uniform pattern" and "This homogeneity" in the following text?

However, when examining other demographic factors such as age, educational background, social status, socio-economic status, and family situation, the results suggest a uniform pattern of social media usage among Arab youth. This homogeneity indicates that factors like age, education, and socio-economic background have less influence on the frequency of social media use compared to gender in this demographic group. These findings highlight the need for further exploration into the cultural and societal factors influencing these usage patterns.

What type of correlation coefficient has been used to investigate the correlation between time spent on social media and addiction among Arab youths, and express the exact p-value.
