Thank you for allowing me the privilege of reading this article. I have some small suggestions only. Well done to all of you!

"Until now 1,486,361 confirmed cases of COVID-19 have been identified up till now in Pakistan out of which 210,726 cases are from the KP province." is repetitive, please remove the first 'until now'.

For the Introduction - there are several paragraphs with only 2 sentences. I believe several of them could be combined into one paragraph with a summary opening sentence to make it flow a bit better.

Your Conclusion should be more detailed and include a restatement of your research question, clear results based on the data, and opportunities for future research/gaps in the literature you uncovered.
