Abstract

Abstract need more details of the entire study aspects and why are there too many questions in abstract, you are supposed to explain and not ask question in abstract.

Redo abstract

What is this study all about?

Is it a qualitative paper, a case study etc, no clear explanation

It looks like an assignment paper and not a research paper

Introduction

Various studies have been conducted on these concepts, what is new in this study?

Explain the gaps and justify the objectives of the study.

Explain the core issues and the evidence especially statistics and with current literatures to support the issues of this study.

Explain the missing link in the discussions about the way in which countries manage situations related to study but also a gap in academic knowledge.

Identify the research problem -- as with any academic study, you must state clearly and concisely the research problem that is being investigated.

Appropriate background information has not been provided with special terms and concepts defined.

Lacks research topic or problem not clearly stated shown to be worth investigating as there were many studies conducted, and therefore need to highlight the extension from previous studies.

Are you focussing on a specific country or general and this may impact the study as there are various aspects that need to be considered such as developed, developing and less developed country as it work differently in these categories.

Explain in detail the objective of the study.

Literature Review is totally missing from the study

Need to strengthen the literature review.

Places each source in the context of its contribution to the understanding of the specific issue, area of research, or theory under review.

Describe the relationship of each source to the others that you have selected.

Identifies new ways to interpret, and shed light on any gaps in, previous research.

Review scholarship on the topic, synthesizing key themes, and, if necessary, noting studies that have used similar methods of inquiry and analysis.

Note where key gaps exist and how your study helps to fill these gaps or clarifies existing knowledge.

The author should have discussed the issues in detail and how the issues were not resolved or partially resolved by previous studies.

Discuss the important recent extensions that have been made to the model to make it more realistic, and give a brief overview of some of the older and more recent empirical studies that have fitted the model. Such contributions add up the value of the paper.

Any relationship between the scope and theories also needs to be discussed

Literature review is lacking the in-depth of the study.

No Methodology

No Analysis

Discussion

The finding of the research needs to be compared and contrasted with findings, theories, models and concepts derived from the literature review.

The relevance of the conclusions for stakeholders has not been discussed thoroughly

Good discussion section includes analysis of any unexpected findings. This part of the discussion should begin with a description of the unanticipated finding, followed by a brief interpretation as to why you believe it appeared and, if necessary, its possible significance in relation to the overall study.

The discussion section should end with a concise summary of the principal implications of the findings regardless of their significance. Give a brief explanation about why you believe the findings and conclusions of your study are important and how they support broader knowledge or understanding of the research problem.

Conclusion

The overall argument has not been summarized.

The reflection on the aims, methods, and results of the research is lacking.

Relevant recommendations have not been discussed.

What are your recommendations to the overall stakeholders?

Conclusions and recommendations discussed in the context need to be widely applicable

References

Lack of current academic citation throughout the study.
