

Review of: "Flood Prediction Using Artificial Neural Networks: A Case Study in Temerloh, Pahang"

Mohammad Arab Amiri

Potential competing interests: No potential competing interests to declare.

My main concern is the novelty of the paper. I think the authors couldn't justify the novelty of their paper properly.

Figure 1 has no specific information and should be deleted.

Results and discussion only presents the obtained results! And there is no discussion.

Some suggestions for future work should be added to the conclusion.

Figure 3: The closeness of training and validation results is suspicious!
