Review of: "Next-Generation Space Cardiology: Developing a COMSOL-Enabled Digital Heart Twin for Long-Duration Missions"

Patrick A. Gladding¹

1. Waitemata District Health Board, Auckland, New Zealand

This review is comprehensive, well-structured, and well-written for reader comprehension. It deserves publication in its current form; however, a reference to echocardiography, a methodology more amenable to spaceflight, could be mentioned. Also, practical space-based clinical applications of the cardiac simulator could be discussed. What is this ultimately for?
