Inhibin B

National Cancer Institute

Source

National Cancer Institute. <u>Inhibin B.</u> NCI Thesaurus. Code C2278.

Inhibin B, consisting of an alpha subunit and a beta B subunit linked by disulphide bonds, is a heterodimer hormone produced by the follicle cells of the ovary and by the Sertoli and Ledig cells of testis. Although other forms of inhibin also exist in men, inhibin B is the predominant form in the circulation in men.
