Potential competing interests: No potential competing interests to declare.

Topic is interesting and tried to cover all the things but need improvements:

In abstract give more information about results especially gender differences.

Start of introduction needs to be changed and use academic writing style, cite research references related to gambling statistics

Lack of Literature review especially related to Uganda students.

Make section t of rationale/ objectives of study instead of writing in detail on problem statement

Specify the age range of participants and also mention the education level, change the wordings, orally passed over by research assistants etc

Mention the reliability and validity of scales,

In discussion part, relate your findings with your previous literature findings and elaborate it.

In conclusion make things more clear by making it precise and don't introduce new things.
