# Peripheral Breast Papilloma

National Cancer Institute

## Source

National Cancer Institute. *Peripheral Breast Papilloma*. NCI Thesaurus. Code C36088.

A benign papillary neoplasm that arises in a terminal ductal lobular unit. It is characterized by the presence of a fibrovascular core that is lined by benign epithelial and myoepithelial proliferations. Peripheral breast papillomas are often multiple and are usually found microscopically. Patients are often asymptomatic.
