Potential competing interests: No potential competing interests to declare.

- The abstract should explain the main results of the study. Adding one sentence at least can be good to include a little more findings in the abstract.
- The importance and necessity of the study should be mentioned clearly in the last paragraph.
- What was the control treatment? Was there any replicate for the treatments? If not, how did the authors assure that their data is reliable?
- It is recommended to mix sections 2 and 3 as Materials and Methods. It could help to separate each section clearly.
- The Discussion should be more extended and cover related literatures with similar and opposite findings.
