**Potential competing interests:** No potential competing interests to declare.

1. This was a small participant experiment. It is recommended that the number of participants should be more than 30. In addition, selected participants should have a consistent perception of spiciness. It is recommended that each participant's acceptance of spiciness should be measured before the experiment to show the fairness of the results.
2. There is no scale (such as 1-5 points) for the evaluation of spiciness.
3. Future applicability. The results should show value for practical application.
