Potential competing interests: No potential competing interests to declare.

The authors of this present research in which:

- 1- They develop PaaS type cloud computing-based web applications built by migrating data between webs via web services and web servers.
- 2- Also, they present automated data analytics with the use of computer systems to carry out analytical tasks.
- 3- The basic idea is that the application of PaaS type cloud computing on government websites can be integrated on one platform in order to be used for further analysis.

The subject is very interesting for future food supply management.

While in my opinion there are two negative points:

- In this paper, we need a simple use case to show the application of this approach.
- The paper needs to be well checked to remove some troubles in the writing.
