The article sent "SBRT (Stereotactic Body Radiotherapy) in Recurrent Head Neck Cancer - Boon or Bane?" is a commentary on the history and use of stereotactic body radiotherapy (SBRT) for recurrent head and neck cancer.

This is a well-written text and a well-done review of current data. The only issue I could identify was that two prospective phase III trials by the French GORTEC group, even-though old and with limited use of its data, were not mentioned. To my knowledge, those are the only phase III trials on the matter and should be mentioned, even in a critical light.

I recommend publication.
