Provide feedback BCT

Behaviour Change Intervention Ontology (BCIO)

Source

Behaviour Change Intervention Ontology (BCIO)

Definition: A monitoring BCT in which feedback about the behaviour is provided.

Comment: Feedback is provision of data about some aspect of behaviour without an evaluation (positive or negative). Where feedback includes reward or punishment, see behavioural consequence BCT, outcome consequence BCT and their child classes. If there is no clear evidence that feedback was given, code 'observe behaviour without feedback BCT' or 'record behaviour without feedback BCT'.

This definition was imported from the Behaviour Change Intervention Ontology (see https://bciosearch.org/). Comments and suggestions for improvements are welcome using the Qeios review system.

Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation https://www.qeios.com/read/YGIF9B.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
