# Dot Locations Long Delay

National Cancer Institute

## Source

National Cancer Institute. *Dot Locations Long Delay*. NCI Thesaurus. Code C120325.

A component of the Children's Memory Scale. A child is presented with an array of dots (6 or 8 positions depending upon the child's age), which is learned over 3 trials. A distractor array is then presented. Following a 30 minute delay, the child is then asked to reproduce the initial array.
