

# Review of: "Zero-Divisor Graphs of $\mathbb{Z}_n$ , their products and $D_n$ "

Mona Abdi

**Potential competing interests:** The paper is interesting, non-trivial, and with significant examples. It is my view that the paper will enjoy broad readership because of the relationship between the algebraic properties and the graph-theoretic properties. I thus recommend that it be published after the authors have attended to the matters that I mention in the attached file.
