Endometrial Endometrioid Adenocarcinoma

National Cancer Institute

Source

National Cancer Institute. *Endometrial Endometrioid Adenocarcinoma*. NCI Thesaurus. Code C6287.

A primary endometrial adenocarcinoma composed of neoplastic cells that form complex glandular patterns associated with budding and branching of the neoplastic glands. The neoplastic glands resemble those of the normal endometrium and may or may not be associated with sheet-like proliferation of malignant cells. Endometrioid adenocarcinoma is the most commonly seen morphologic variant of endometrial adenocarcinoma.
