## Review of the manuscript titled "Side effects of COVID-19 vaccination in Pakistani population: A cross sectional study"

- The authors aim to assess the adverse reactions and the impacts of different factors in a relatively larger cohort and compare the side effects and severity of COVID-19 before and after the vaccination.  
The study was a cross sectional questionnaire-based in nature conducted in Pakistan.
- Previous studies conducted in Pakistan reported mild adverse reactions of the vaccines and the factors associated with these side effects, this study reported the complete profile of the adverse reactions linked to these vaccines to resolve the speculations associated with it.
- Tables and figures are well-presented and clear.
- The aim of the study was clearly explained in the conclusion.
