Potential competing interests: No potential competing interests to declare.

1. According to the PRISMA statement, at least 2 independent authors and 1 independent supervisor are needed for a systematic review to minimize the risk of bias.
2. The authors should revise the manuscript by following the newest PRISMA 2020.
3. The PICOS should be clarified to make the process replicable, as well as the inclusion and exclusion criteria.
4. As I mentioned in Q3, it is not recommended to pool evidence from studies of different designs.

Therefore, this manuscript needs at least a major revision for future publication.
