**Potential competing interests:** No potential competing interests to declare.

The topic of work is novel and interesting and may hold future promise. However, I feel that the work is not equipped with a substantial methodology or suitable references. For example, the author claims that "All things in the universe are interrelated based on quantum entanglement." However, neither any references are given to validate this statement nor does the author make any argument to justify the statement. The author wishes to utilize quantum entanglement as a resource to implement the task. It would be better to get some numbers over which quantum induction will work or how long distances over which this phenomenon can be realised (given the state-of-the-art or even if some futuristic assumptions are made).
