**Potential competing interests:** No potential competing interests to declare.

The paper is well written. However there are several issues that need to be addressed by the authors:

1. The abstract is very brief. No conclusions have been made from the study.
2. The literature used need to be updated.
3. The methodology need to be more detailed so that other researchers can duplicate the research.
4. The findings are not reviewed critically, it should show the novelty/significance of the study.
