TSPO wt Allele

National Cancer Institute

Source

National Cancer Institute. *TSPO wt Allele*. NCI Thesaurus. Code C122728.

Human TSPO wild-type allele is located in the vicinity of 22q13.3 and is approximately 12 kb in length. This allele, which encodes both translocator protein and putative peripheral benzodiazepine receptor-related protein, plays a role in the transport of cholesterol across mitochondrial membranes.
