Adult neuronal ceroid lipofuscinosis

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Adult neuronal ceroid lipofuscinosis. ORPHA:79262*

Adult neuronal ceroid lipofuscinoses (ANCLs) are a genetically heterogeneous group of neuronal ceroid lipofuscinoses (NCLs; see this term) with onset during the third decade of life, characterized by dementia, seizures and loss of motor capacities, and sometimes associated with visual loss caused by retinal degeneration.
