The given article is a nice initiative towards exploring our existing traditional medical systems for finding newer alternatives to fight against cancer. I have thoroughly read the article and found the following minor corrections:

1. Tables for main cancer types, prevalence, and mortality in Indians and the world need to be revised, and more latest data should be updated, if possible.
2. A quick revision for sentence formation and formatting is required.
3. The review is good to go, but the addition of a few more cases will make it better.
