Nodular lichen myxedematosus

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. *Nodular lichen myxedematosus*. ORPHA:90393

Nodular lichen myxedematosus is a rare form of localized lichen myxedematosus (see this term) characterized by the development of skin-coloured mucinous nodules on the limbs and trunk, with mild or absent papular eruption.
