Your paper effectively addresses the crucial issue of educational gaps regarding reptiles among Bulgarian students. It highlights significant findings that have important implications for conservation efforts. The paper is well-researched and written in a clear and logical manner. By addressing the following suggested revisions, you can enhance clarity, depth, and the overall impact of your findings:

- Include a more detailed review of relevant literature, particularly recent studies on attitudes towards reptiles and the effectiveness of environmental education programs.
- Provide more information on the survey design, sampling methods, and validation processes. Discuss any limitations related to the sample size and potential biases.
- Acknowledge the limitations in generalizability and suggest future studies that could explore these attitudes in different age groups, geographic areas, or cultural contexts.
