Thank you for your effort. This is important work on the Assessment of the Diabetes Risk Score Tool to Find Undiagnosed Type 2 Diabetes Mellitus in Primary Health Care Center Attendees in Sudan's Referral Clinics.

I think there was a gap in the primary scientific contribution or the novelty of research in this paper earlier. At the same time, the methodology and the findings sections need to be more refined. The results began more with an explanation of the new data than with the results. It would be interesting to see how these are addressed in a revised version. Looking forward, thank you.
