To publish this manuscript as a quality research paper, the following corrections need to be done:

1. In the introduction part the authors need to cite new literature and provide crucial information about previously conducted reports
2. In the material and methods part the questionnaires created for students need to be presented as tables
3. In the result parts I suggest that the statistical data should be presented as graphs. In that way, it is easier to follow the results
4. The discussion part is the major problem. In this part, you should compare your research findings with other scientists and give us insights into major problems regarding this experimental study.
5. Correct the grammar errors throughout the whole manuscript
