

Review of: "The outbreak of lung injuries often known as "EVALI" was nothing to do with nicotine vaping"

Wayne Hall¹

¹ University of Queensland

Potential competing interests: I have no competing financial interests but I have published an article expressing the same explanation of the causes of the EVALI outbreak and criticised public health authorities for their misleading communication about the causes of the outbreak.

The author has provided a succinct and well supported analysis of why nicotine vaping played no role in the EVALI outbreak, notwithstanding the view of the CDC as implied by the name given to the lung injury.
