Localized lichen myxedematosus with mixed features of different subtypes

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Localized lichen myxedematosus with mixed features of different subtypes. ORPHA:90398

Localized lichen myxedematosus (LM) with mixed features of different subtypes is a form of atypical lichen myxedematosus (see this term), characterized by mixed features of the 5 subtypes of localized LM which are: discrete papular LM, acral persistent papular mucinosis, self-healing papular mucinosis, papular mucinosis of infancy, and nodular LM (see these terms).
