# Review of: "Economics Research in the Twenty-First Century — 25 Years of Scientific Breakthroughs"

Michelle Moraes<sup>1</sup>

1. Instituto Politécnico de Lisboa, Portugal

The paper "*Economics Research in the Twenty-First Century — 25 Years of Scientific Breakthroughs*" presents a clear connection between its objective and the applicability of the topic discussed, offering a relevant analysis of the main aspects studied in recent years, such as "Bias." The author successfully provides an in-depth perspective on the subject, with an engaging and insightful discussion that undoubtedly contributes to the understanding of economic research.

However, there are a few areas where the paper could be clearer and more detailed, which would help strengthen its contribution to the field. First, it would be beneficial to clarify the criteria used for the selection of the journals included in the study. An explanation of the factors that influenced the choice of publications would offer a more comprehensive understanding of the sample and allow for a more accurate assessment of the representativeness of the data collected.

Additionally, the methodology and tools used for content categorization should be more thoroughly explained. A detailed description of these processes is essential for readers to clearly understand how the data were analyzed and how the conclusions were drawn. A deeper explanation of the categorization tools and the rationale behind their application would provide greater transparency in the presented analysis.

In summary, the paper is well-structured and addresses a relevant topic. It can be further developed in terms of data and methodological details
