# Salivary Gland Sebaceous Lymphadenoma

National Cancer Institute

## Source

National Cancer Institute. *Salivary Gland Sebaceous Lymphadenoma*. NCI Thesaurus. Code C35555.

A rare, benign epithelial neoplasm composed of irregular proliferating nests and islands of epithelium, including solid and gland-like sebaceous elements, surrounded by lymphoid stroma. Most occur in the parotid gland. Symptoms include a progressively enlarging, painless mass. Sebaceous lymphadenocarcinoma is the malignant counterpart.
