Potential competing interests: No potential competing interests to declare.

The article addresses a very relevant topic regarding post-COVID syndrome.

However, the following observations can be considered:

1. Including flow charts or diagrams to explain the pathogenesis would make it more interesting to read.
2. Most of the references are old, prior to 2019; it would be better if some more recent references could be added.
3. Usage of bullet points will also make it more understandable.

A topic that is of such importance and of vast interest due to being a global problem should be easy to understand and remember. Taking care of the above points should aid in making it so.
