It is an important study written in fluent language. I need more detailed information about the study group and I would like to see the preferred method of analysis. There is only one research question and more than one topic is addressed in the findings. Maybe this part may need a revision. "Internally, teachers lack knowledge about both physical and psychological harassment, leading to ineffective motivation and behaviour change. Additionally, some teachers experience psychological issues that hinder their ability to manage emotions, making them more sensitive and reactive." I need a scientific source for the judgement.
