

Review of: "Factors contributing to labour unrest at the garment factories in Bangladesh: A cross-sectional study"

Chamdan Purnama

Potential competing interests: No potential competing interests to declare.

This script is good, but there are parts that should be explained in more depth. Each comment is listed below.

1. Introduction: I believe that additional particular background information on the occurrence and historical context of labor unrest in the clothing sector would be beneficial.
2. Research Methodology: I believe it would be beneficial to include more details about sample selection techniques, such as inclusion and exclusion criteria.
3. Data Analysis: I believe it will be quite useful to explain the methodology used for statistical analysis and to provide transparency about the assumptions made throughout the analysis.
4. Findings and Discussion: I believe it will be very useful to discuss how this temuan-temuan differs from previous research and to identify temuan-temuan that is unique or does not exist.
5. Limitations: Additional constraints, such as any sample biases or generalizability problems related to the study's specific geographical scope or time period, would be beneficial to discuss. Addressing these constraints allows for a more complete understanding of the study's potential consequences.
6. Conclusion and Recommendations: I believe it will be very beneficial in terms of generating ideas for future research and overcoming any stumbling blocks that may arise as a result of this research.

Hopefully what I wrote can be useful, thank you.
