Potential competing interests: No potential competing interests to declare.

The authors have analyzed the effects of some childhood neurodevelopmental disorders. The study is interesting. My comments are as follows.

1. The authors didn't cite any references in the text.
2. The Introduction section is short. The authors should explain each of the relevant past studies. This will help readers know the relevant research background.
3. Future research guidelines need to be highlighted in the conclusion section.
4. What is the motivation for this study?
