**Potential competing interests:** No potential competing interests to declare.

I appreciate the authors' effort. The authors need to make the following points clear:

1. Specify the detailed title of the article. It is mentioned as a "solar system."
2. The abstract is not up to the mark.
3. The MPPT word should be in the bracket while using it for the first time in the abstract.
4. The graph units are wrong and they are not clearly explained anywhere else.
5. In Figure No. 10, the Y-axis notation is missing.
6. The irradiation unit is entered in the wrong place.
7. There is no novelty in this article and other MPPT models are not explained, like sliding mode controller-based MPPT.
