Primary Cutaneous Anaplastic Large Cell Lymphoma

National Cancer Institute

Source

National Cancer Institute. *Primary Cutaneous Anaplastic Large Cell Lymphoma*. NCI Thesaurus. Code C6860.

An anaplastic large cell lymphoma limited to the skin at the time of diagnosis. Most patients present with solitary or localized skin lesions, which may be tumors, nodules or papules. The t(2;5) translocation that is present in many cases of systemic anaplastic large cell lymphoma, is not found in this disease. (WHO, 2001)
